

Carton Coding & Labelling Off-Line

With the Travtec TR-750 Speed-Feeder

Simplify your stock control by labelling and coding your cartons off-line!

The TR-750 Speed-Feeder is designed to feed flat, cartons and paper sheets for coding with inkjet or laser, labelling, or print & apply. The carton is presented to the inkjet printer or labeller in a horizontal orientation, allowing the top face to be accessed.

The machine can be supplied either as a turnkey system, or for integration with existing equipment to maximise cost benefit and minimise downtime. Changeovers between product runs can be completed in less than 5 minutes, and options can be provided such as a shingling conveyor, OCV/OCR and label detection vision system, barcode scanners, and reject unit.

TECHNICAL SPECIFICATION:

Construction: *Stainless steel framework. Heavy duty drives, Quick-change design. CE Certified*

Controls: *PLC controller. With HMI operator interface, intermittent & continuous feed. Batch counter.*

Power Required: *110/220/240 v AC Single phase. 1.5 kW loading.*

Throughput: *30—250 products per minute depending on size.*

Carton Sizes: *Length: 60 - 400mm; Width: 35 - 350mm; Thickness: 0.1- 5mm.*

Dimensions: *Length: 1510mm; Width: 510mm; Height: 1460mm.*
